CLAIMS

A method of removing CO₂ from a gaseous stream comprising:
 contacting a gaseous stream with a solution, the solution being formed by combining at least:

a primary or secondary polyamine having an amine concentration of at least 3.0 equivalents/Kg water,

an alkali salt having a concentration of at least 1.0 equivalents/Kg water, and water;

whereby contacting removes CO2 from the gaseous stream; and

- regenerating the solution.
 - 2. The method of claim 1, wherein the polyamine is piperazine, a piperazine derivative, ethylenediamine, dimethyl ethylenediamine, pyrazolidine, imidazolidine, 2-(2-pyrrolidyl)pyrrolidine, or 2-(2-imidazolidyl)imidazolidine.
- 3. The method of claim 1, wherein the alkali salt is potassium carbonate, sodium carbonate, lithium carbonate, a bicarbonate salt, a bisulfide salt or a hydroxide salt.
 - 4. The method of claim 1, wherein the gaseous stream is contacted with the solution at a temperature of approximately 25°C 120°C.
 - 5. The method of claim 1, wherein the rate constant for the reaction of CO₂ with the piperazine derivative (K_{PZ}) is at least 25 m³/mol-s at 25°C.
- 20 6. The method of claim 1, wherein the solution further comprises an additive.
 - 7. The method of claim 1, wherein the polyamine concentration and the alkali salt concentration are at least 2.3 m.
 - 8. The method of claim 1, wherein the ratio of equivalents of alkali salt to equivalents of polyamine is 0.3 3.0.
- 25 9. The method of claim 1, further comprising applying a water wash system, wherein the water wash system collects the polyamine from treated gaseous stream.
 - 10. The method of claim 1, wherein the rate for the solvent-mediated removal of CO₂ from the gaseous stream is at least 1.5 times the rate for CO₂ removal in a method using an aqueous solution of 5.0-M monoethanolamine.

11. A composition, comprising:

5

15

20

a piperazine derivative having a concentration of at least 3.0 equivalents/Kg water,

a potassium salt having a concentration of at least 1.0 equivalents/Kg water, and water,

wherein the ratio of equivalents of alkali salt to equivalents of the piperazine derivative is 0.3 - 3.0.

- 12. The composition of claim 11, wherein the piperazine derivative is piperazine.
- 13. The composition of claim 11, wherein the potassium salt is potassium carbonate, potassium bicarbonate, potassium bisulfide, or potassium hydroxide.
 - 14. The composition of claim 11, wherein the ratio of equivalents of alkali salt to equivalents of piperazine derivative is 0.5 2.0.
 - 15. The composition of claim 11, wherein the concentration of the piperazine derivative is at least 5.1 equivalents/Kg H₂O and the concentration of the alkali salt is approximately 5.1 equivalents/Kg H₂O.
 - 16. The composition of claim 11, further comprising an antifoaming agent, an antioxidant, a corrosion inhibitor, a flocculation aid, or a mixture thereof.
 - 17. A method of removing CO₂ from a gaseous stream comprising:

 contacting a gaseous stream with a solution, the solution being formed by combining at least:

a primary or secondary polyamine having an amine concentration of at least 5.1 equivalents/Kg water,

an alkali salt having a concentration of at least 5.1 equivalents/Kg water, and water;

- whereby contacting removes CO₂ from the gaseous stream; and regenerating the solution.
 - 18. The method of claim 17, wherein the concentration of the polyamine and the concentration of the alkali salt are at least 5.5 equivalents/Kg water.

19. The method of claim 17, wherein the concentration of the polyamine and the concentration of the alkali salt are approximately equal.

- 20. The method of claim 17, wherein the polyamine is piperazine, a piperazine derivative, ethylenediamine, dimethyl ethylenediamine, pyrazolidine, imidazolidine, 2-(2-pyrrolidyl)pyrrolidine, or 2-(2-imidazolidyl)imidazolidine.
- 21. The method of claim 17, wherein the alkali salt is potassium carbonate, sodium carbonate, lithium carbonate, a bicarbonate salt, a bisulfide salt or a hydroxide salt.
- 22. The method of claim 17, wherein the gaseous stream is contacted with the solution at a temperature of approximately 25°C 120°C.
- 10 23. The method of claim 17, wherein the rate constant for the reaction of CO₂ with the piperazine derivative (K_{PZ}) is at least 25 m³/mol-s at 25°C.
 - 24. The method of claim 17, wherein the solution further comprises an additive.

5

15

20

25

- 25. The method of claim 17, wherein the rate for the solvent-mediated removal of CO₂ from the gaseous stream is at least 1.5 times the rate for CO₂ removal in a method using an aqueous solution of 5.0-M monoethanolamine.
- 26. A method of removing CO₂ from a gaseous stream comprising:

 contacting a gaseous stream with a solution, the solution being formed by combining at least:
 - a primary or secondary polyamine having an amine concentration of at least 3.0 equivalents/Kg water,
 - an alkali salt having a concentration of at least 1.0 equivalents/Kg water, and water;

wherein the solution contains less than 1% of a monohydric or polyhydric alcohol; whereby contacting removes CO₂ from the gaseous stream; and regenerating the solution.

- 27. The method of claim 26, wherein no alcohol is added to the solution.
- 28. The method of claim 26, wherein the polyamine is piperazine, a piperazine derivative, ethylenediamine, dimethyl ethylenediamine, pyrazolidine, imidazolidine, 2-(2-pyrrolidyl)pyrrolidine, or 2-(2-imidazolidyl)imidazolidine.

29. The method of claim 26, wherein the alkali salt is potassium carbonate, sodium carbonate, lithium carbonate, bicarbonate salt, a bisulfide salt, or a hydroxide salt.

- 30. The method of claim 26, wherein the gaseous stream is contacted with the solution at a temperature of approximately 25°C 120°C.
- 5 31. The method of claim 26, wherein the rate constant for the reaction of CO₂ with the piperazine derivative (K_{PZ}) is at least 25 m³/mol-s at 25°C.
 - 32. The method of claim 26, wherein the solution further comprises an additive.
 - 33. The method of claim 26, wherein the polyamine concentration and the alkali salt concentration are at least 2.3 m.
- 10 34. The method of claim 26, wherein the ratio of equivalents of alkali salt to equivalents of polyamine is 0.3 3.0.
 - 35. The method of claim 26, wherein the rate for the solvent-mediated removal of CO₂ from the gaseous stream is at least 1.5 times the rate for CO₂ removal in a method using an aqueous solution of 5.0-M monoethanolamine.
- 15 36. A method of removing CO₂ from a gaseous stream comprising:

 contacting a gaseous stream with a solution, the solution being formed by combining at least:
 - a piperazine derivative having an amine concentration of 3.0-10.0 equivalents/Kg water,
 - an alkali salt having a concentration of 3.0-10.0 equivalents/Kg water, and water;

wherein the concentration of the piperazine derivative and the concentration of the alkali salt are approximately equal;

whereby contacting removes CO₂ from the gaseous stream; and regenerating the solution.

20

25

37. The method of claim 36, wherein the piperazine derivative is piperazine, aminoethylpiperazine, hydroxyethylpiperazine, 2-(3-pyrrolidyl)piperazine, 3-(3-piperidyl)piperidine, 3-(2-piperazinyl)piperidine, 3-(3-pyrrolidyl)piperidine, or 2-(2-piperazinyl)piperazine.

38. The method of claim 36, wherein the alkali salt is potassium carbonate, sodium carbonate, lithium carbonate, a bicarbonate salt, a bisulfide salt, or a hydroxide salt.

- 39. The method of claim 36, wherein the gaseous stream is contacted with the solution at a temperature of approximately 25°C 120°C.
- 5 40. The method of claim 36, wherein the rate constant for the reaction of CO₂ with the piperazine derivative (K_{PZ}) is at least 25 m³/mol-s at 25°C.
 - 41. The method of claim 36, wherein the solution further comprises an additive.

10

42. The method of claim 36, wherein the rate for the solvent-mediated removal of CO₂ from the gaseous stream is at least 1.5 times the rate for CO₂ removal in a method using an aqueous solution of 5.0-M monoethanolamine.
